

Pilot Study Provides Evidence of Efficacy of Lakota

The results of a new clinical study show that Lakota Extra Strength Joint Care reduced osteoarthritic pain 2.4 times more than placebo. It also improved physical function, and reduced stiffness.

The randomized double blind placebo-controlled study on the efficacy of Lakota Extra Strength Joint Care Formula is the first study focusing on the efficacy of Lakota Joint Care products.

The Lakota Extra Strength Joint Care Formula group showed a greater mean reduction in WOMAC® scores in all the three WOMAC® sections (pain, stiffness and physical function) at the two and four week assessments, when compared to placebo. Group analyses demonstrated that treatment with Lakota Extra Strength Joint Care Formula was effective and reduced the WOMAC® pain score in subjects by 54%, total stiffness scores by 55%, and total physical function scores by 54.5% compared to 26% in placebo from baseline to week 4. Although due to small sample size between groups The incidence of adverse events was low and the prevalence was found to be less than the placebo group.

The study involved 18 adults over 45 diagnosed with OA of the target knee (Kellgren and Lawrence radiological score of stage I to III). Participants were also required to have a score \geq 40 mm on the first item of WOMAC® scale. Participants were given either Lakota Extra Strength Joint Care or a placebo for 4 weeks.

The authors of the study, Dr. David Crowley and Dr. Dale Wilson concluded that “Lakota Extra Strength Joint Care Formula was more effective as compared to placebo and reduced the WOMAC® pain score in the target knee 2.4 times, WOMAC® stiffness score 1.2 times and WOMAC® physical function score 2.1 times greater than placebo. This data suggests that treatment with Lakota Extra Strength Joint Care Formula maintained positive effects during the course of the 28 days of the study in comparison to placebo. Based on adverse event data collected and hematological and clinical chemistry of subjects, Lakota extra strength joint care formula is safe at an oral dose of 6 caplets per day.”
