

LAKOTA

Clinically Proven Natural Back Pain Relief

100% Natural Product Proven as Effective as Prescription Drug.

Up to eighty percent of Canadians, experience Back Pain. Until recently the only relief options available were chemical and most included methocarbamol. Methocarbamol is a central nervous system depressant and is the most common over-the-counter back pain reliever in Canada. Because the method of its action is not fully understood, the FDA has restricted Methocarbamol to prescription only. This has left most Canadians with a difficult choice: take the chemical central nervous system depressant or suffer with the pain. Now Canadians have an alternative.

There is a new chemical free solution to back pain - Lakota Triple Strength Back Pain. This back pain formula combines powerful Native American pain relievers, natural source muscle relaxants, and medicinal minerals to completely relieve back pain. The ingredients of Lakota Triple Strength Back Pain have been clinically proven to relieve back pain as effectively as the prescription drug Vioxx. Finally, an all-natural pain reliever proven as effective as a prescription painkiller!

Lakota Triple Strength Back Pain eases back pain with three therapeutic actions.

Relieves pain– the most effective natural source pain relief extracts available for chronic back pain.

Relaxes muscles– relaxes muscle spasms and eases tension without Methocarbamol.

Rebuilds– Lumanite is a medicinal mineral that aids in the growth of healthy connective tissue and may reduce inflammation.

Lakota Triple Strength Back Pain not only offers relief from back pain, but it also helps maintain a strong, pain-free back. Now there is a natural back pain relief product that is clinically proven.
